

Grigg Brothers® technologies are backed by 45 years of product development, independent university research, and extensive field trials. We're committed to continual research and product development, and will make no unsubstantiated claims of product performance. Turfgrass managers can trust our products to perform with safe, proven results as they face challenges of plant and soil health, environmental concerns, and integrated pest management.

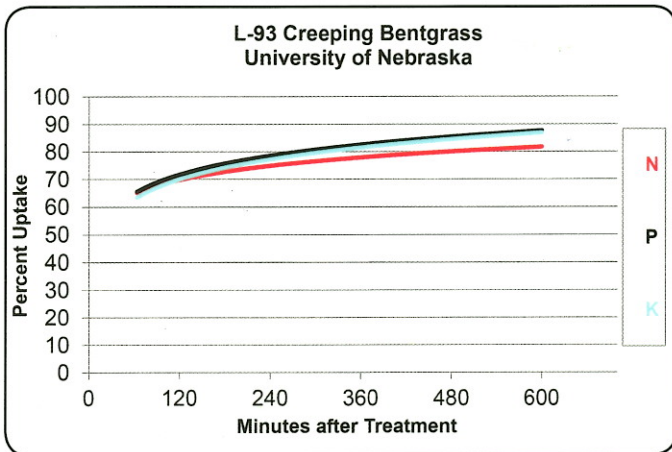

What's the Environmental Impact?

Proven efficiency means maximum plant nutrient use and limited losses to the environment as leachate and/or runoff. These efficiencies further maximize fertilizer budget dollars.

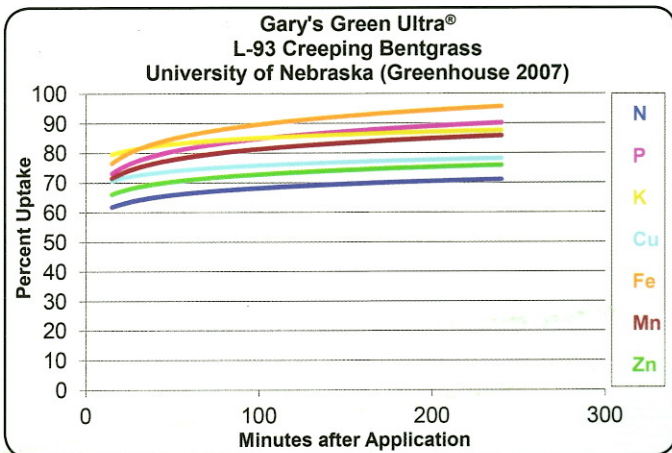

Grigg Brothers® has always meant quality, performance, and compatibility. It also means proven efficiency. We recognize that innovation through research and development are vital to maximizing budget dollars while providing the best agronomic solutions.

Grigg Brothers® Proven Foliar™ Fertilizers offer:

- Documented efficiency
- Increased plant health
- Control
- Simplicity
- Compatibility
- Safety (plants, environment, human)

Understanding the absorption efficiency of each applied nutrient will allow turfgrass managers a higher degree of control over their fertilizer programs and the ability to more effectively maximize and enhance turfgrass nutrition.

Greenhouse research documents greater than 60% uptake of Grigg Brothers® Proven Foliar® nutrients within 15 minutes after application.
